SUMMARY

Senior Mobile Engineer with 5+ years of experience building and shipping production apps in Flutter, native Android (Kotlin, Jetpack Compose) and native iOS (Swift, SwiftUI), backed by hands-on .NET backend experience. Delivered 15+ applications, including government apps for Saudi entities (Ministry of Finance, Ministry of Tourism, Digital Government Authority, National Cybersecurity Authority) and a secure fintech investment platform. I design modular Clean Architecture codebases, build real-time features with SignalR, and bring security, automated testing (up to 90% coverage) and CI/CD into every release.

PROFESSIONAL EXPERIENCE

Riadiat 09/2026 – Present

Senior Mobile Developer

Perfect Presentation (2P)

04/2026 – 06/2026

Smart Village

- **Architected the perfect_logger package**, a custom Flutter library built on Dio and SignalR that centralizes production observability and real-time error tracking.
- **Led key ERP mobile features**, resolving critical bugs and refactoring legacy code while coordinating with UI/UX and Business Analysis teams to streamline delivery.
- **Engineered real-time features for enterprise chat applications** using SignalR, ensuring low-latency event synchronization across mobile clients.

Senior Mobile Developer

Sure Global Technology

10/2023 – 04/2026

Nasr City, Cairo

- **Rebuilt the Madar HR self-service app from scratch in Flutter** after assessing the legacy codebase as unmaintainable. As primary developer (about 85% of 400+ commits), designed and built **17 modules** (attendance, leaves, overtime, permissions, business missions, transfers, training, certificates and more) on a modular Clean Architecture (common, domain, data, di packages) with BLoC/Cubit and Retrofit/Dio: 100+ screens, 157 API endpoints and about 80K lines of code, in Arabic and English.
- **Built the NCGR Android app for the Saudi Ministry of Finance** (National Center for Government Resources Systems) with Jetpack Compose, Flows, Paging 3 and Hilt on Clean Architecture, reaching **90% unit-test coverage** with MockK.
- **Developed the MT Android app for the Saudi Ministry of Tourism**, adopting Jetpack Compose for a modern, maintainable UI.
- **Delivered the DGA Android app** for the Digital Government Authority, and contributed user-profile features to the **BOE Android app** for Saudi regulations.
- **Top contributor to the NCA employee app in Flutter** (about 45% of 550+ commits on an eight-person team): Azure AD sign-in, attendance, leaves, visits and service catalogs. Built a .NET 8 mock API mirroring 33 production endpoints so the team could test before the real backend was ready.
- **Partnered with UI/UX designers and cross-functional teams** to turn wireframes into consistent Flutter and native Android interfaces for complex client requirements.

Senior Flutter Developer

PFI (Part-time)

10/2024 – Present

Remote

Felousy — Smart Investment Platform (Flutter, iOS/Android): a fintech app for eKYC onboarding, investing in financial funds, managing a wallet and tracking portfolios.

- **Led end-to-end delivery of the production Flutter app** as primary developer (about 80% of 700+ commits) on a modular Clean Architecture split into separate Dart packages (domain, data, di, common), with BLoC/Cubit and GetIt: 14 feature modules and 75 API endpoints across eKYC onboarding with a liveness selfie, funds, orders, wallet deposits and withdrawals, and notifications.

- **Hardened the app** with SSL pinning, AES-256-GCM payload encryption, freeRASP runtime protection, root detection, biometrics and secure token storage, then **fixed every finding from an independent penetration test**.
- **Wrote 580 unit tests** across the data and domain layers.
- **Set up CI/CD** in GitHub Actions, Jenkins and Azure DevOps with dev/prod flavors and release hardening (obfuscation, split debug info), distributing builds through Firebase App Distribution.
- **Integrated Firebase Crashlytics and FCM**, local notifications and deep/universal links for transactional navigation, improving reliability and engagement.

Senior Mobile and Software Developer

04/2024 – Present
Remote

Freelance

- **Build and maintain Flutter apps for Android and iOS** for clients, focused on performance, stability and a smooth user experience.
- **Deliver .NET backend work** and integrate it with the mobile apps it serves.
- **Work directly with clients** to turn business needs into custom solutions, running several projects in parallel to tight deadlines.

Part-time Flutter Developer

04/2023 – 03/2024
Remote, Kuwait

Deals

- **Took over Hojozat**, a pair of Flutter apps (customer and business admin) on a shared backend, and **shipped the first production release of both** in December 2023.
- **Built reservation, order and payment flows**, Firebase push notifications and a QR scanner for owners, then delivered new requirements such as free reservations.

Senior Software Engineer

02/2023 – 10/2023
Cairo, Egypt

Celltek

- **Delivered 2 Flutter apps** to client requirements, with strong performance and a clean user experience.
- **Built a Messenger chatbot in JavaScript** that automated customer support and improved engagement.
- **Developed a responsive website in vanilla JavaScript**, keeping the code simple and fast.
- **Resolved complex technical issues** across several concurrent projects while meeting strict deadlines.

Software Engineer

08/2021 – 08/2023
Cairo, Egypt

Arab Resource Group (ARG)

- **Designed, built and published iOS and Android apps**, including the RINO self-service iOS app, which I built as sole developer in UIKit and Alamofire, and a Flutter desktop POS app for the company.
- **Led the team on specific features** and supported the Android developers, working closely with backend, UI/UX and QA teams.
- **Managed Azure deployments**, tuning performance while keeping hosting costs down.
- **Maintained company .NET projects** and helped prepare proposals that matched solutions to prospective clients' needs.

iOS Trainee

07/2021 – 08/2021
Qatar · Internship

Ebdaa Digital Technology

EDUCATION

Bachelor of Information Systems, Faculty of Business Administration

06/2016 – 01/2020

Misr University for Science and Technology

SKILLS

.NET

C# - ASP.NET Core Web API - EF Core (Code First) - SQL Server - Clean Architecture - CQRS & MediatR - Repository & Unit of Work - SignalR - Identity, Authentication & Authorization - FluentValidation - AutoMapper - Localization - Push Notifications - Azure

Flutter

Dart - BLoC/Cubit - Provider - GetX - GetIt - Clean Architecture (modular packages) - Dio/Retrofit - RESTful APIs - Firebase (FCM, Crashlytics) - Realm - SharedPreferences/GetStorage - Localization & RTL - Isolates - Google Maps & Geolocation - Payment Gateways - Push Notifications - AES-GCM Payload Encryption - SSL Pinning & Runtime Protection - Unit/Widget Testing

Android

Kotlin - Jetpack Compose - XML Views - MVVM - Clean Architecture - Hilt - Coroutines & Flow - Paging 3 - Jetpack Navigation - Retrofit - Room/Realm - View Binding - Activity/Fragment Lifecycle - Unit Testing (JUnit, MockK)

iOS / macOS

Swift - SwiftUI - UIKit - AppKit - Combine - MVVM - Alamofire - RESTful APIs - Push Notifications - UserDefaults - ViewController Lifecycle - TestFlight & App Store release

Delivery

GitHub Actions - Jenkins - Azure DevOps - Firebase App Distribution - Build flavors - Obfuscated release builds

Common

OOP - SOLID - Generics - Design & Architectural Patterns - Dependency Injection - Unit Testing - Git - Agile/Scrum - Figma-to-code

PROJECTS

PerfectOrder

Full-Stack POC · ASP.NET Core, EF Core, SQL Server, SignalR

- **Built a collaborative order management API** with ASP.NET Core, EF Core and SQL Server to explore advanced backend architecture.
- **Implemented real-time synchronization** with SignalR, using MediatR to decouple business logic from event-driven notifications.
- **Designed a feature-based architecture** with the repository pattern, image handling and a workflow-driven order status (from collection to closure).

Clipy

github.com/AymanOmara/clipy

macOS utility · Swift, SwiftUI, AppKit

- **Built a native macOS clipboard manager** with offline history, instant search, a global shortcut, trackpad gestures and quick paste, without sending copied content to a server.
