SUMMARY

Senior Flutter engineer with 5+ years of shipping production iOS and Android apps, plus native Android (Kotlin, Jetpack Compose) and iOS (Swift). Built apps for five Saudi government entities, including the Ministries of Finance and Tourism, led a fintech investment app through an independent penetration test, and was primary developer on a 17-module, 100+ screen HR app rewrite. I own the work end to end: modular Clean Architecture with BLoC/Cubit, mobile security, automated testing (up to 90% coverage), CI/CD, and Arabic/English RTL from day one.

PROFESSIONAL EXPERIENCE

Senior Flutter Developer (Freelance & Contract)

04/2023 – present
Remote

Part-time client work alongside full-time roles

- **Felousy investment app for PFI (10/2024 – present):** led delivery as primary developer (~80% of 700+ commits) across 14 feature modules and 75 API endpoints: eKYC onboarding with a liveness selfie, funds, orders, wallet and notifications, on modular Dart packages with BLoC/Cubit.
- **Fixed every finding from an independent penetration test** on Felousy, with SSL pinning, AES-256-GCM payload encryption, freeRASP runtime protection, root detection, biometrics and secure token storage, backed by 580 unit tests.
- **Set up CI/CD** in GitHub Actions, Jenkins and Azure DevOps with dev/prod flavors, obfuscated release builds and Firebase App Distribution.
- **Hojozat reservation apps for Deals, Kuwait (04/2023 – 03/2024):** took over the customer and owner Flutter apps from an agency, rebuilt reservation and payment flows, an availability calendar and QR check-in, shipped the first production release of both in 12/2023, then turned the customer app into three branded apps.
- **Ibn Sina:** replaced a legacy Xamarin app the store kept rejecting with a Flutter rewrite built from scratch, plus a Flutter web dashboard for the client and contributions to its ASP.NET Core backend.

Senior Mobile Developer

04/2026 – 06/2026
Smart Village, Giza

Perfect Presentation (2P)

- **Architected the perfect_logger package**, a custom Flutter library built on Dio and SignalR that centralizes production observability and real-time error tracking.
- **Engineered real-time features for enterprise chat applications** using SignalR, ensuring low-latency event synchronization across mobile clients.

Senior Mobile Developer

10/2023 – 04/2026
Nasr City, Cairo

Sure Global Technology

- **Led the Flutter rewrite of the Madar HR self-service app** as primary developer (~85% of 400+ commits): 17 modules, 100+ screens and 157 API endpoints on modular Clean Architecture with Cubit and Retrofit, in Arabic and English with biometric login and root detection.
- **Core contributor (367 commits) to Etimad Government, the NCGR Android app for the Saudi Ministry of Finance:** meetings, voting, decisions and committee screens in Jetpack Compose with MVI, Paging 3 and Hilt; fixed 20+ production bugs and reached **90% unit-test coverage** with MockK.
- **Built bus transport, gamification, offers and permissions in the Saudi Ministry of Tourism employee super app** (20+ services, Azure AD, Intune), shipped to production through Fastlane with fixes from its cybersecurity review.
- **Delivered login with biometrics, profile, QR digital ID, My Services and My Box in the Digital Government Authority (DGA) Android app**, and built the user-profile features of the BOE Saudi regulations app on Google Play.

- **Top contributor (~45% of 550+ commits, 8-person team) to the National Cybersecurity Authority (NCA) app in Flutter**, and built a .NET 8 mock API mirroring 33 production endpoints so the team could finish attendance, leave and service flows before the real backend was ready.

Senior Software Engineer

Celltek

02/2023 – 08/2023

Cairo, Egypt

- **Developed 2 production Flutter apps** for clients, from requirements to release.

Software Engineer

Arab Resource Group (ARG)

08/2021 – 02/2023

Cairo

- **Built the RINO self-service iOS app as sole developer** in UIKit and Alamofire, published the company's iOS and Android apps, and built a Flutter desktop POS app.

PROJECTS

CashRoot, Offline-first Personal Finance App

04/2026 – present

Flutter · iOS & Android · Co-developer in a 2-person team

- **Owned the app's security layer:** PIN and biometric lock enforced at the router, re-authentication before sensitive changes, a fail-closed lock configuration, and screenshot blocking on financial screens.
- **Built encrypted cloud backup and restore** to iCloud and Google Drive (AES-GCM, PBKDF2 key from the user's passphrase) that rejects damaged or tampered files and survives an interrupted restore.
- **Shipped through a scripted release pipeline** to TestFlight, Google Play and Firebase App Distribution, backed by 850+ unit, widget and integration test files and full Arabic/English RTL localization.

Wirdi, Islamic Companion App

04/2026 – present

Flutter · Kotlin · iOS & Android · Solo developer · [Android APK](#)

- **Designed and built it alone** (502 of 518 commits): 23 feature modules covering the Quran with tafsir and memorization, prayer times, qibla and adhkar, on separate common, domain, data and di Dart packages.
- **Wrote a native Android plugin in Kotlin** that plays the full adhan on time even when the app is closed, plus seven home-screen widgets and on-device recitation checking.
- **Wrote 1,400+ automated tests** and hardened release builds with Dart obfuscation, R8 shrinking and per-release symbol archiving for decoding crash traces.

SKILLS

Flutter

Dart, BLoC/Cubit, get_it, modular Clean Architecture (separate Dart packages), Dio/Retrofit, Firebase (FCM, Crashlytics, App Distribution), Drift, Hive, Isolates, native plugins in Kotlin, home-screen widgets, background audio & WorkManager, Arabic/English RTL, bloc_test, Flutter Web & Desktop

Android

Kotlin, Jetpack Compose, MVVM/MVI, Hilt, Koin, Coroutines & Flow, RxJava 3, Paging 3, Room, Retrofit, JUnit & MockK, Azure AD & Intune

iOS & macOS

Swift, SwiftUI, UIKit, AppKit, Combine, MVVM, Alamofire, App Store & TestFlight releases

Security & Delivery

SSL pinning, AES-GCM payload encryption, runtime protection (freeRASP), root detection, biometrics, secure storage, penetration-test remediation, GitHub Actions, Jenkins, Azure DevOps, Fastlane

EDUCATION

Bachelor of Information Systems, Faculty of Business Administration

06/2016 – 01/2020

Misr University For Science And Technology
